جمع

C: Read the following passage and match each paragraph with one of the following headings (main ideas).

Headings (main ideas)

- (A) Hit your friend and laugh!
- (B) Laughter comes before words.
- (C) The humor of the body or the humor of words.
- (D) Have fun Playing Practical Jokes

3 42..... Physical comedy is probably the oldest kind of comedy in the world. A long time before people had languages, or even words, they laughed, because the need to laugh seems to be inside everyone. We laugh to feel good and we also laugh to join ourselves together with other people. Without words, the people of long ago had to use their bodies to bring humor into their lives.

43.....One kind of physical comedy is slapstick. This is the kind of comedy where someone steps on a banana skin and falls over. Other examples of slapstick are throwing food in someone's face, pushing someone into the water, or slapping someone. Think of Charlie Chaplin falling down, or other famous actors like Laurel and Hardy - that is slapstick.

44.....A second kind of physical comedy is the practical joke. A practical joke is something you do to somebody to make other people laugh, and this kind of joke is probably more popular among men and young people. People in Western countries think it is fun to play practical jokes on their friends or family. Changing the time on the clocks is an example of practical joke - and if people get up early by mistake while you stay in bed laughing, it is successful practical joke! Putting salt in the sugar bowl is another example.

45.....Although physical comedy is still common in many countries and cultures, there is probably less of it in some other countries. Others, enjoys telling jokes. People from Athens, in Greece, were probably the first Western culture to move away from physical comedy and laugh more at words.

D: Reading Comprehension: Read the following passages and **answer the questions** choosing the best choice.

Before Newton's time, scientists knew something about gravity. They knew that gravity makes objects fall to the ground and keeps houses and people from being thrown into space. Could it be, Newton asked himself, that the Earth pulls the Moon and keeps it from running away? And could it be that the Sun pulls the Earth and the other planets and keeps them in their orbits? Newton thought so.

At first, he could not prove that his idea was right. He himself decided that he was thinking the wrong way. But years later, he worked again on the problem and found out that he had been right after all. He wrote a famous book about gravity. He made other discoveries. For instance, he found out that sunlight is made up of rainbow colors. He studied sunlight blowing bubbles and watching colors in them. People were surprised to see a grown up person doing this for hours at a time.

Newton wanted to find out more about the other planets, too. But he was not satisfied with the view of the telescopes that were available. To get a better one, he invented a new kind of telescope. It helped him find out many new things about the sky.

46. Scientists who lived before Newton.....

- a. were familiar with what we now call gravity
- b. did not know why objects fell to the ground
- c. did not know some force hold them on the Earth
- d. were surprised that houses stick to the ground

5 47. Newton wrote his first book when he.....

- a. found out he was on the wrong way
- b. decided to become famous in his country
- c. realized that his ideas were correct
- d. decided to share his experiments with others

48. The underlined word "one" in the last paragraph refers to.....

- a. kind
- b. view
- c. experiment
- d. telescope

49. The phrase "made up" in paragraph 3 is closest in meaning to.....

- a. bent
- b. built
- c. separated
- d. composed

*****True or False**

50. Newton became sure that the Moon was running in space. True False

51. It was something usual for people to watch a man blowing bubbles. True False
